- **Benefits:** Free tier with professional features
- **Deployment:** Git integration

- **Cost:** Free tier available

Your Existing Hosting

Hostinger Integration

- **Method:** File Manager upload via hPanel
- **Location:** public_html directory
- **Benefits:** Direct control, existing infrastructure
- **Cost:** Already paid for

Deployment Instructions

For Static Hosting (Vercel, Netlify, etc.)

1. Download `apexone-builder-dist.zip`
2. Extract contents
3. Upload `dist` folder contents to hosting platform
4. Configure domain (if needed)

For Full-Stack Hosting (Railway, Render, etc.)

1. Clone repository or upload source code
2. Configure environment variables
3. Deploy both frontend and backend
4. Configure database (SQLite included)

For Hostinger

1. Access hPanel File Manager

2. Navigate to public_html
3. Upload and extract apexone-builder-dist.zip
4. Access via your domain
